Keywords

Camaenidae, zoological nomenclature, homonymy, Papua New Guinea, *Papuanella*, *Ogeramua*

Results

The genus *Papuanella* (type species *Geotrochus ogeramuensis* Kobelt, 1914, by original designation) was established by Clench and Turner (1959: 5) for two species of land snails inhabiting the Central Highlands of Papua New Guinea. *Papuanella* is currently recognized as a valid genus within the subfamily Papuininae of the family Camaenidae (Schileyko 2003).

Distant (1914: 352) established *Papuanella* for a genus of fulgorid homopterans also inhabiting the island of New Guinea, and thus Clench and Turner's taxon is a junior homonym in need of replacement. Accordingly, pursuant to Article 60 of the International Code of Zoological Nomenclature (International Commission on Zoological Nomenclature 1999), the name *Ogeramua*, nom. n., is here proposed as a replacement

name for *Papuanella* Clench & Turner, 1959 (non *Papuanella* Distant, 1914). Species included in the genus as defined by Clench and Turner (1959) are *O. ogeramuensis* (Kobelt, 1914), comb. n., and *O. finisterrensis* (Kobelt, 1914), comb. n.

The epithet *Ogeramua* is named for Ogeramua, Papua New Guinea, the type locality of its type species, and is to be treated as feminine in gender.
